

# Great Newport Street

## About the Project

Deconstruct (UK) Limited were appointed by Knight Harwood to deliver the builder's works package, structural Core infill which included Block and brick work along with a scissor lift and RC lift pit, Drainage package was also include.

New steel work was installed throughout the project in order to form larger floor areas which was facilitated by temporary works installed to support existing beams, a central core of support steel work was installed to accommodate metal decking and concrete slabs.

## Project Challenges

Deconstruct met these project restraints through their intensive project planning, despite the small footprint and situated on a busy location in Leicester Square a sensible solution was required for the delivery of 70 Tonne of structural steel and 150m<sup>3</sup> of concrete.
